

*The safety of a brand name
for your Aluminum Clad Wood Windows*

UNILUX Aluminum Clad Wood Windows –
weatherproofed on the outside, warm wood on the inside!

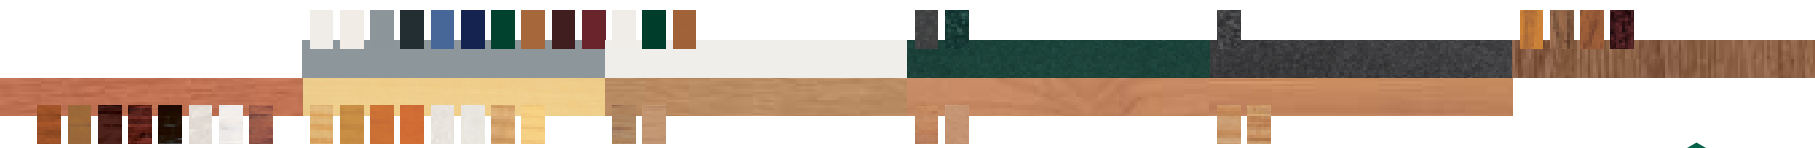

THE GREAT BRAND FOR PROGRESS

WOOD AND ALUMINUM – TWO MATERIALS FOR AN AMAZINGLY WIDE VARIETY OF MODELS.

... how attractive opposites can be!

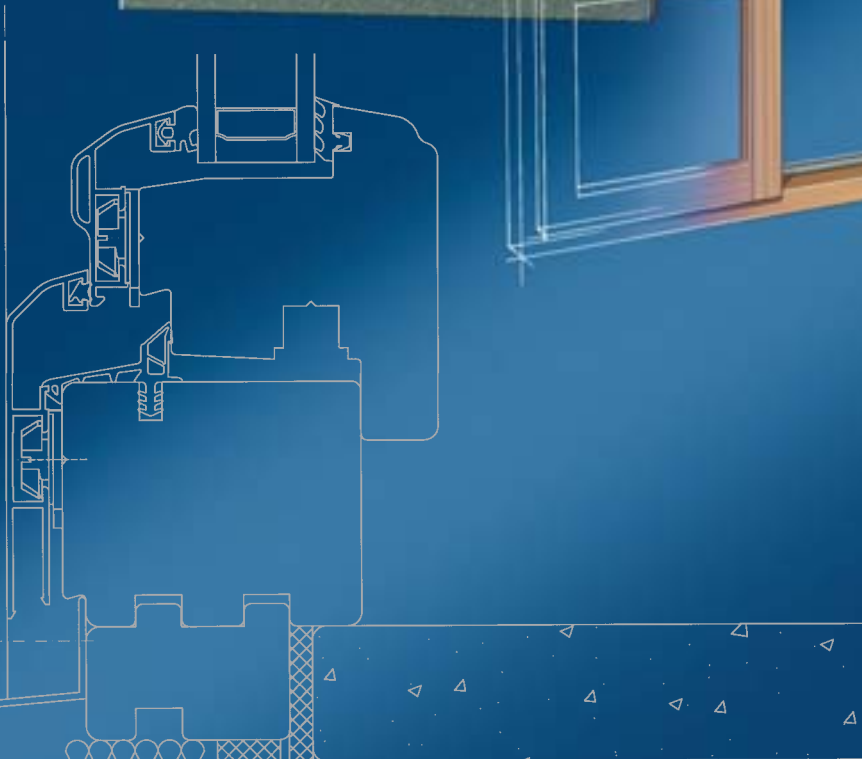

A program miracle:
A unique range of materials & colours.

UNILUX OFFERS YOU THE SECURITY AND EXPERTISE OF AN EXCELLENT NAME BRAND.

... or do you believe in quality and know-how w

FOR QUALITY, CHOOSE UNILUX.

ithout expertise?

HIGH-TECH IS NO AN ACCIDENT. OUR OWN CONSISTENT RESEARCH AND DEVELOPMENT HAVE MADE UNILUX A ROLE MODEL FOR QUALITY AND NEW IDEAS IN THE INDUSTRY. WHILE ALWAYS STAYING FOCUSED ON HIGH QUALITY FOR OUR CUSTOMERS.

With innovations that push the market ahead...

THE KNOWLEDGE OF MANY MINDS ARE IN UNILUX PRODUCTS. NOT ONLY DURING THE TRAINING OF OUR OWN EMPLOYEES UNILUX CONVEYS EXTENSIVE KNOW-HOW AND IDEAS ABOUT WINDOW TECHNOLOGY OF THE FUTURE, BUT ALSO WITH EDUCATIONAL SEMINARS

... we have made history in quality from the very beginning.

Today no one home is like the other. Individuality and new ways of expressing oneself are in greater demand than ever before. The one thing that all homes still have in common is that their owners want quality from the basement to the attic. Naturally, at an acceptable price. You need products that you can count on. From the materials to the manufacturing to the installation – all the way down to the delivery dates. UNILUX offers you the finest name brand quality at affordable prices.

Guarantees that used to only be made by experienced master craftsmen are today what we

expect to be measured by: consistent, excellent, superb quality! No discrepancies, no inaccuracies, no compromises about materials or workmanship. This is possible because of UNILUX's unique expertise in window construction. Through years of clever innovations in products and manufacturing technology we have indisputably become # 1 in customised wood windows in Germany. UNILUX Classic brands prove: builders rightly trust the quality of name brand manufacturers, name brand quality from UNILUX., Wood as well as vinyl is manufactured on millimetre accurate CNC controlled precision machi-

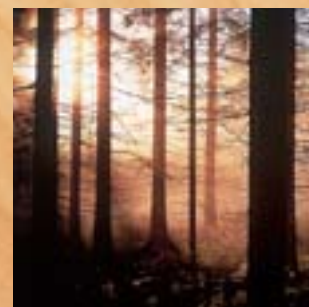

nes and with selected materials which are tested thoroughly for quality and durability. Our newest top product – the UNILUX aluminum clad wood window - developed right here by us, shows you how it is possible to permanently weatherproof wood on the outside and still maintain the warmth of wood inside.

One year after being introduced to the market in 2000 this product advanced to be the market leading window in Germany. And not without reason, the combination of wood-aluminum offers two advantages for the price of one.

THE WARMTH OF WOOD FOR A BEAUTIFUL HOME.

... adds beauty and elegance to your décor?

IF YOU HAVE A HEART FOR NATURE,
YOU'LL LOVE THE NATURALNESS OF WOOD
IN UNILUX ALUMINUM CLAD WOOD WINDOWS.

Wood breathes, wood is alive, wood is nature. Since the beginning of time we appreciate wood as the most natural of all building materials. Its warmth, its noble atmosphere and beauty accompany us in almost all areas of our daily life. Wood is one of the few raw materials which is basically infinitely available. It not only continuously grows back, but is also recyclable and very ecological. Functioning as oxygen supplying CO2 reservoirs, forests play an essential role in stabilising the world's climate. That is why we at UNILUX only buy wood where

reforestation is guaranteed: our employees guarantee the quality and naturalness of our wood supplies in several countries around the world.

We'll show you the most beautiful side of wood. UNILUX has been the long time leading manufacturer for customised wood and aluminum clad wood windows in Germany. With plenty know-how of materials and manufacturing we produce windows with consistent precision and quality that can not be beaten, not even by the most precise master craftsmen. This begins with the selection of materials, continues on with computer accurately milled joining and ends with products that radiate quality. There is a reason why our wood windows have become the

standard of modern wood window technology. Divided light grids, round tops, special shapes – a variety of colours and styles are combined at UNILUX into one of the most beautiful programs for wood windows ever. The materials are perfect – perfect quality rating and appearance. We now use these years of experience regularly as a reference for new things, for even better UNILUX Aluminum clad wood windows. Because above all, the interior is where wood combines aesthetics and high class thermal insulation values with the unmatched beauty of an all

natural material. And now with the weatherproof of aluminum casing on the outside you can enjoy this "naturalness" on the inside, without constantly having to repaint or add protective coatings. Just as it is, looking just as wood grain naturally appears and almost free of imperfections. Oak, alder, birch, exotic woods or pine – five selected wood types show you wood from its most beautiful side. Not only "devoted ecologists" appreciate this...

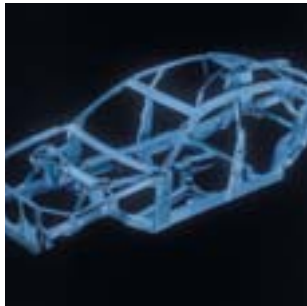

HIGH-TECH OF TODAY FOR WINDOWS OF TOMORROW: ALUMINUM CLAD WOOD WINDOWS FROM UNILUX.

... unless you think aluminum is only for auto bo

ALUMINUM –
THE MATERIAL OF THE FUTURE.
100% NON-CORROSIVE –
100% RECYCLABLE.

dies and aeroplanes?

It has been used for auto bodies for years and also been proven in the aerospace industries - aluminum. A material with very special characteristics. Aluminum is not only non-corrosive but it can also be recycled 100%. Light weight, but yet sturdy it can easily be formed into almost any shape without overstraining the strength. A true material of the future. But not only in the field of high-tech does aluminum show its very own specific characteristics, the aluminum outer casing of our new UNILUX wood-aluminum window emphasises the elegant design and makes it invulnerable to wind, weather and envi-

ronmental influences. Eight different surface structures for about 180 colours and simulated wood finishes offer even the most high flying artistic fantasies a perfect selection.

... and constant window painting is a thing of

Premium quality and design noticeably
INCREASE THE VALUE of a house.

Aluminum is dependable PROTECTION against
climatic influences.

Outside

High quality raw materials
PRESERVE THE VALUE.

A single idea, a double advantage: protection on the outside with aluminum

With the new Aluminum clad wood window UNILUX has brought forth an ingenious idea: the natural aesthetics of a real wood window, coupled with the outstanding technical properties of extremely durable aluminum. Your double advantage: inside the warm cosy atmosphere of natural wood, outside the protection against climatic influences and durability of a genuine futuristic material. Aluminum protects the wood for decades, making annoying paint jobs a thing of the past. And because it is recyclable, aluminum has an excellent "ecological balance".

the past!

Inside

The raw material wood represents
BEAUTY AND WARMTH.

UNILUX: A large program for every STYLE.

The natural material wood creates
A HIGH LIVING QUALITY.

Inside beauty and the distinction of quality with comfortable wood.

For interiors the combination wood and aluminum also offers convincing extra advantages: not only does the exterior have a long-lasting protection, the inside of the new UNILUX aluminum clad wood window basically does not have to ever be repainted either. The weather-proofed aluminum exterior makes it possible to leave the inner side completely natural - without a weatherproof all-round coating, making it possible to see the wood in its "natural state". Of course all of these advantages of wood-aluminum are equally interesting for both old and new buildings. This offers a unique alternative to

pure wood as well as to vinyl windows, particularly for people who count on high quality and authenticity. The introduction of the UNILUX aluminum clad wood window puts this product, with double advantages, onto the market at a price which every builder can afford. Nobody has to go without the wonderful look of noble wood in their living room windows just because they want to have weatherproof windows on the outside. A worthwhile investment with the name brand quality. That is why aluminum clad wood windows are becoming more and more interesting for the future, also for quality conscious

remodelers. Reaserach confirms: requests for Aluminum clad wood windows are constantly increasing. No wonder, outside you have the long-lasting weatherproofing and preservation of value, inside you have the style and cosiness in harmony with nature. Who could say "no" to that? Especially because this means the unbeatable comfort of easy maintenance and durability even in climatically difficult areas.

A program miracle:
a unique range of materials & colours.

WE OFFER MORE THAN JUST PLAIN METAL.

... or do you think aluminum is still just as colour

ALUMINUM OPENS A WORLD
FULL OF COLOURS TO YOU.

UNILUX MAKES WINDOW PROGRESS AFFORDABLE FOR EVERYONE.

... and who wouldn't like to have an automobile

with a star for the price of a beetle?

WHAT HASN'T BEEN DONE BEFORE,
IS BEING DONE NOW AT UNILUX:
ALUMINUM CLAD WOOD WINDOW
PROGRESS AT A PROGRESSIVE PRICE.

Only a named brand manufacturer like ourselves, can afford to do what we have done. With much technical know-how and lots of effort we are finally producing an affordable quality product for everyone, from our long time and much valued, but still only available to few, "Luxury Window". And who wouldn't like a prestigious product at a great price?

The market will change, the aluminum clad wood window will bring the biggest benefits for its owners: "Inside the look of fine wood and never have to paint the outside again". Now that this ingenious idea has been realised, it is beginning to spread more and more throughout Europe. No wonder, it is a known fact that European builders are extremely quality conscious. Now no one

has to do without the comfort of the superior advantages of Aluminum clad wood windows. Market leadership was achieved only one year after introduction to the market is proof of the quality of UNILUX aluminum clad wood windows.

ALUMINUM CLAD WOOD WINDOWS FROM UNILUX – A MORE REFINED EXTERIOR DESIGN.

... so there are 1001 possibilities to stylishly de

corate new and old buildings.

Remodeling or new construction? Time-honoured old estate, renaissance facade? Modern Museum, designer bungalow? Builders, architects and city planners now have new possibilities to stylishly renovate a building with UNILUX aluminum clad wood windows. From unique, maybe even eccentric, colour combinations, modern architecture to historically preserved buildings restored according to old plans, "exhibit buildings". Futuristic or conventional, unique or traditional?

Even if you have a "traditional" home which you need to furnish with windows: UNILUX can fulfil your colour wishes – for every type of home. And elaborate colour nuances and shades for you to choose from make your "project" an eye-catcher.

7. Exclusive Feature

ALUMINUM CLAD WOOD WINDOWS
FROM UNILUX:
VERY CLEVER THIS CONSTRUCTION.

Everyone knows: not everything that looks good is good and not everything that is good, looks good. Now when designing your own home, you can have both beauty and functionality. With the new Aluminum clad wood windows from UNILUX you can get wood and aluminum not only in its most beautiful form but also innovative in detail. From the frame to the weatherstripping Aluminum clad wood windows from UNILUX offer you unbeatable weather protection and value preservation the way it should be in today's world: premium quality, aesthetic and flexible!

More light, better view
with narrow window profiles.

Solid, sturdy construction depth –
even for larger glass sizes.

Outside

Aluminum premium quality and compact design noticeably increase
the value of your home.

High quality, durable raw materials
guarantee appreciation.

Ideal possibilities for additions to buildings
for all purposes, old or new buildings.

Reliable protection against wind and weather, complete coverage of the wood.

The frame profile with its solid, sturdy construction depth can easily fit and hold even the heaviest glass panes. Laminated lumber makes the frames capable of support distortion-free. Durability this makes them not only the ideal solution for basically every design, they also offer ideal building addition possibilities for all purposes from older buildings to new buildings. Weathersripping is necessary, but sometimes they disturb the appearance. By setting it back we have made them virtually invisible. With this and the narrow profiles of the wood frames you get the largest possible

glass area giving you more light and a better view. In addition flush fitting hardware make cleaning and care very easy. Not all windows seal this tight: with only 5 mm [0.20"] "air gap" between window and frame the frame construction also supports the excellent thermal insulation. Of course thermal insulation glass (U_g 0,19 BTU/hr-ft²-F (US) according to DIN 4108-4) is also "standard equipment" for our aluminum clad wood windows. After all the excellent sound and thermal insulation of the low recessed frame construction shouldn't be alleviated by the glass pane.

ALUMINUM GRIDS IN GLASS

Windows are also “picture frames” for our view to the outside and are seen as pleasant or unpleasant. Windows can express a very personal taste and style too. They determine the outside appearance of our homes and also a part of our personality. Like the eyes of a face they make an impression on us, nice or not so nice. Now you can make your own very individual design wishes come true with aluminum clad wood windows from UNILUX. Modern or traditional, simple or elaborate– almost everything is possible. Slants, arches, angles – you can get whatever you

need made-to-measure: from single sash windows to multi-sash panorama windows, from semi-round or compound arch to completely round windows. aluminum clad wood windows from UNILUX blend in harmoniously with any architecture. Do you have a balcony or a terrace? Then large scale “parallel sliding/tilt systems” – for example in the same style as the rest of the house – are just what you need. So many window versions with or without grids, decorative or separating the panes, in aluminum clad wood, bronze or aluminum ... you choose!

USER FRIENDLINESS STARTS HERE WITH THE DETAILS.

... and with UNILUX you have a good "handle" on

STANDARD HANDLE WHITE

HANDLE WHITE WITH LOCKING BUTTON

HANDLE WHITE LOCKABLE

HANDLE BRONZE

HANDLE STEEL COLOURED

HANDLES AND HARDWARE FOR PERFECT WINDOW TECHNOLOGY.

A good appearance is one thing for windows. User friendliness and safety is completely another one. With UNILUX you don't have to give up security or aesthetics to get modern easy to use comfort. Even after several years our windows still function correctly and are easily opened and closed. Do you want a window that can be tilted too? One with a child safety lock? Considering all the different window variations UNILUX has handles for every kind of hardware mechanism, for every material and for every decor. In white, bronze or silver we offer two additional safety

handle versions along with the standard handles. The first version is lockable - this locks permanently against unauthorised entrance from outside but also from the inside, for example against opening by children. The second version is with a lock button - which prevents the window from being opened from the outside even when it's tilted because the handle can only be turned if the lock button is pushed at the same time. Additional security against burglars is added by the 4 corner locking mechanism with sturdy mushroom shaped bolts - these could only be

pulled out of the fitting with a strength of over (1220 kg) 2000LBS! Sash stopper and protection against slamming shut are serial. They mostly prevent the window from "slamming" when it is in turn/tilt position and there is a draught. User friendliness and safety go hand in hand with our flush set fittings which are easy to clean but impossible to prise open. Last but not least: easy and exact closing, adjustable roller bolts and window lifts for window locking perfect user friendliness and safety.

your windows.

NOT TOO MUCH "TOLERANCE": CORNER BEARING ADJUSTABLE IN HEIGHT AND SIDE GUARANTEE TIGHTNESS OF THE WINDOW SASH.

NO IMPACT FACE: FLUSH SET HARDWARE PROTECTS AGAINST DIRT AND RESISTS BREAK-INS.

YOU NEED MORE THAN JUST WOOD AND SCREWS FOR A "CLEAR VIEW".

... and who would forget the glass just because

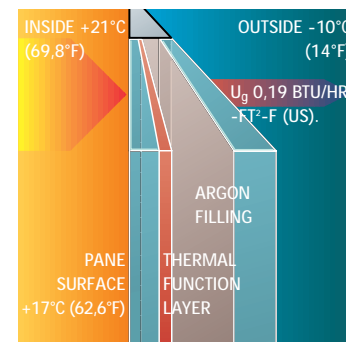

GLASS FROM UNILUX –
LAYER FOR LAYER GREAT OPTIC.

of all the wood and aluminum?

The UNILUX glass program – backed by the know-how of our own glass processing – fulfils many wishes: such as screening from views with patterned glass, sun protection glass, elements with sound insulation up to class 4 (42 dB). Especially important: UNILUX glass helps you save energy. The Energy Conservation Regulations require the builder to take proper measures against unused warmth slipping out of his building. Measured with the so-called “U-value” (used to be k-value). What is that? To make it short – the lower the U-value the better the thermal insulation the lower the heating costs. The old single glazing only reached a value of

1,02 BTU/hr-ft²-F (US), common standard insulation glass 0,49 BTU/hr-ft²-F (US).. For you this means: with UNILUX glazing (serially Ug-value 0,19 BTU/hr-ft²-F (US)) you save about 500 litres of heating oil per year with only 35 m² glass surface as opposed to single glazing. For this effect the double glazing gets a razor thin coating of silver on the inner side. This allows solar energy in but hardly any warmth out. Low heat conducting argon gas in between the panes also reduces thermal loss. For a good room climate – even near the windows.

UNILUX WARM GLASS 1.1 (U_g 0,19 BTU/HR-FT²-F (US)). (CROSS SECTION)

THE "SAFE PACKAGE" FROM UNILUX – YOU CAN BE SAFE WITH IT.

... or did you really want to make it easy for

ALUMINUM CLAD WOOD WINDOWS FROM UNILUX –
YOUR SAFETY PLUS
FOR A GOOD NIGHTS REST.

burglars?

LOCKABLE HANDLES OR HANDLES PROVIDED WITH LOCKING APPARATUS PROTECT YOU FROM "UNWANTED GUESTS".

TOOLS TO LEVER – BASICALLY HAVEN'T GOT A CHANCE: THE BREAK-IN STOPPING HARDWARE TECHNOLOGY FROM UNILUX OFFER BASICALLY NO WORKING SURFACE FOR CRIMINALS.

10LB (4,11KG) BALL FROM 12FT (3,5M) HIGH: TEMPERED GLASS FROM UNILUX WITHSTANDS THIS TEST EVEN THE THIRD TIME = A1- QUALITY!

THE SAFE SECURITY PACKAGE FROM UNILUX: A1 TEMPERED GLASS, SPECIAL HANDLES AND CLEVER FITTING TECHNOLOGY – THE SAFE SOLUTION AGAINST TROUBLE AND FOLLOW-UP COSTS. AND OF COURSE FOR VERY HIGH SECURITY REQUIREMENTS THERE IS ALSO A WK2-EQUIPMENT IN ACCORDANCE WITH DIN V EN V 1627 FF. WITH A3-GLASS.

Police statistics show: several 100.000 times per year somewhere is broken into in the federal territory. Whoever still thinks it won't happen to him must be pretty sure of what he has or he is depending on the safety package from UNILUX. The UNILUX "SAFE" Security not only contains the A1 Safety glass but also locking handles and the highly resistant against break-ins 4-corner locking system. "Mushroom head fittings" that

can hardly be levered out or additional lockable handles are another safety plus. Our uncompromising stability, lever, break and fall tests prove: with the DIN tested UNILUX A1 tempered glass even the toughest thieves have to give up. The double glazing with integrated highly tear-proof polyvinyl butyral film (PVB film) resists a break-in attempt even against hardest beatings of a hammer. (laminated glass)

A1-tempered glass from UNILUX with a U_g -value of $U_g 0,19$ BTU/hr-ft²-F(US) also saves heating costs. And it is even in one of the highest classes for sound insulation (3). The UNILUX SAFE Package not only offers you the highest amount of safety but also saves you money – and a good nights rest for free tops it all off.

... to keep the colour even in a grey in grey clima

Guaranteed for long-term
durability of lacquers
on aluminum surfaces

**ALUMINUM
LONG-THERM FACTOR**

UNILUX aluminum clad wood windows

Acid rain, harmful substances, environmental impacts – the effects of human civilisation can be really harmful. Industrial areas and congested urban areas but also some climatic zones don't "hold back" with extreme conditions. The otherwise healthy climate of the sea is a good example. Residents of coastal areas know: the aggressive air from the sea with a high amount of salt even "eats" stainless steel. This unbelievable effect can be found even 50 miles inland. This means: that even lacquered aluminum has a problem if corrosion starts to eat its way through

and make bubbles under the lacquer at the edges. With aluminum profiles on the buildings this is sometimes the case after years of use even with the normal pre-treatment of aluminum with chemicals. UNILUX offers, as one of the few profile manufacturers, a new perfect protection process for extreme cases. Ask your specialised trade dealer so your windows can get the UNILUX aluminum long-term factor and with that the only real long-term protection against eventual corrosion under extreme influences. And it doesn't matter if you live at the sea or not

"twice is nice" and lasts longer. So don't choose only the wood protecting aluminum outer side that saves you constant repainting but also choose the aluminum long-term factor! This gives you decades of strong holding layers of lacquer without the danger of corrosion. Your UNILUX aluminum clad wood windows will shine in their original, beautiful colours on a continuing basis.
